

# ST STEPHEN'S ANGLICAN CHURCH

11856 MAYS CHAPEL RD., TIMONIUM, MD 21093

Trinity Sunday, May 27<sup>th</sup>, 2018

✠ **In The Name of The Father and of The Son  
and of The Holy Ghost. AMEN** ✠

Today is the Feast of the Holy, Blessed and Undivided Trinity. It is the day upon which we celebrate the revelation that God is, in fact, three divine persons sharing one divine nature. Well, at least some of us are celebrating it. There has always been a body of people who find the notion very difficult to swallow.

This is because they believe such a being is utterly outside the realm of earthly experience. The notion makes them as uncomfortable as the idea of coming face-to-face with the miraculous, you see. And if there's one thing folks don't like in this day-and-age, it's miracles.

Many folks regard the miracle stories in the Bible as sheer superstition because they defy the laws of nature. And there is, of course, no denying they defy the laws of nature. That, after all, is what makes them miraculous: There is no natural way to explain them.

Of course, not all things that are difficult to explain are miracles. For example, if a hunk of pie vanishes from the icebox, it doesn't make sense to assume immediately that its disappearance was miraculous. It would be far

wiser to assume the kids, or the dog, or, or even the cat, got to the hunk of pie before you did.

But the fact that most such events have natural explanations is no reason to doubt the miracles recorded in Holy Scripture. It's silly to assume that God is confined by the same laws of nature of nature he laid down for us. If God is all that we say he is – all mighty, all powerful, all knowing, etc. – logic dictates he is free to break the laws of nature whenever he so chooses.

That said, many of the miracles in the Bible actually conform to the laws of nature. It was an earthquake that dried up the River Jordan and let Joshua and the children of Israel to cross dry shod to fight the battle of Jericho. And the after-shocks of that quake made Jericho's walls come tumbling down.

Furthermore, oceanographers explain that when the wind on the Red Sea blows in the way that Exodus describes, the waters divide in precisely manner recorded in the Bible. In other words, it was a natural phenomenon that allowed Moses and the Children of Israel escape Pharaoh. This in no way alters the fact that these events were

miracles. The miracles lie not in the physical phenomenon, but in the timing.

But while God often works miracles by natural processes rather than supernatural ones, he by no means does so all the time. God can suspend, change, even reverse, his laws of nature whenever he sees fit. He did so when he created the universe. The very act of creation violated laws we claim are immutable.

Another example of the purely miraculous is found in the 9th Chapter of St. John's Gospel. It describes the healing of a man born blind. Everyone who witnessed it was puzzled by it – the man, his parents, and the Pharisee on-lookers.

John quotes the man's parents as saying: "We know that this is our son, and that he was born blind: But by what means he now seeth, we know not . . ." When the Pharisees declared Jesus a sinner because he healed on the Sabbath, the healed man replied: "I don't know whether he's a sinner or not, But one thing I do know: Once I was blind, but now I see."

The reason for their puzzlement is that there is no natural explanation for the cure Jesus performed. The man suffered from a congenital sight defect that could not be cured by hypnosis, autosuggestion, or shock therapy – concepts all well known to doctors in First Century Judea.

But John tells us that – echoing the creation of man – Jesus made a paste of clay and spittle, smeared it on the blind man's eyes and told him wash it off at the Pool of Siloam. Immediately the man did so his sight was restored.

There is no natural explanation for this. By means entirely outside natural law, Jesus knit together severed optical nerves, repaired the deformed cornea, remade the damaged retina – not just of one eye, but of two. How it was done puzzles us today every bit as much as the folks who witnessed it 2000 years ago.

The Virgin Birth, Resurrection and Ascension are similarly supernatural. There is no way to explain them in the laws of nature. There's no natural way to create a baby without the male seed. We can't instill life into a dead body. We can't elevate a body into heaven; a place that, as far as we can tell, doesn't exist on this plane.

Miracles confront us with the reality of our absolute dependence on God. They confront us with the fact that there is an "Intelligence" at work in the universe that is infinitely greater than our own. We do not relish contemplating our limitations. We like to feel in control at all times. Indeed, for many of us life is a constant – though ultimately fruitless – struggle to control their destinies.

But miracles force us to accept that ultimately God controls everything. They are disconcerting because they manifest the awesome extent of God's power and, in doing so, strip away our delusions of autonomy.

They demolish the foolish conceit that we can command our own destinies – the conceit that inspired Adam and Eve to take the first bite out of the fruit of the Tree of Knowledge.

Miracles graphically illustrate our weakness and frailty, thus irrefutably affirming our total dependence upon God's grace. It is a thought that didn't appeal to Adam and Eve in the Garden of Eden and it doesn't appeal to us in the world today. AMEN

***To the Only Wise God, Our Saviour, be Glory and Majesty, Dominion and Power, Both Now and Forever. AMEN.***
